

Do you want to teach, or do you want to be a teacher?

A Reflection on my Career Path

Simbarashe Nkomo

*Assistant Professor of Chemistry
Oxford College of Emory University*

In my presentation, I will talk about how a simple question during my undergraduate education defined my career path. My goal is to share some important decisions I made along the way to my current academic position at Oxford College of Emory University. I am currently an assistant professor of chemistry; my primary teaching responsibilities are Structure and Properties, Principles of Reactivity 1, Light and Matter, and a discovery seminar--Intersection of Science and Society. My research interests are applications of nonlinear models to studies of synchronization behaviors of coupled chemical oscillators and computational chemistry.
